Amendments to the Specification:

Please amend paragraph [0006] as follows:

[0006]This and other objects and advantages are achieved by the method

according to the invention, which starts a fuel cell system with a fuel cell stack

and a heating device connected upstream of the fuel cell stack to heat a cooling

agent to be circulated by a coolant pump. The cold fuel cell stack is operated at a

capacity that generates enough power to operate the heating device and the

The power generated by the fuel cell is used to operate the

heating device for heating the coolant and the coolant pump for circulating the

coolant between the fuel cell stack and the heating device; and the heating device

is switched off as soon as the fuel cell stack has reached a present preset

temperature that is higher than the original temperature.

Please amend paragraph [0020] as follows:

[0020] Referring to the Figure, a fuel cell stack 10 with one anode 12 and

one cathode 14 are disclosed. Hydrogen is supplied to the anode 12 from a source

(not shown) via a line [[6.]] 16. Via a line 18, the cathode 14 is supplied with

oxygen in the form of air, which has been compressed by a compressor 20.

During its operation, the fuel cell stack 10 uses the supplied hydrogen and

oxygen to produce power and water in a manner which is known in the art (and

therefore will not be explained in more detail).
